

Fig A2.a - scaling of the primary regimes in forward passes

pooled 5-fold scaffold CV ONLY · error bars on the ladders and the shaded band around each classical anchor are both ± 1 sd across the 5 folds (no head-seed, no pretraining-seed spread), so every interval means the same thing · the no_pretrain references are omitted here to keep the panels readable; see A1.a/A1.b · the 96M rung and unsup→sup's 48M rung are hold-out-only, so they are absent rather than interpolated · unsup→sup is at its TRUE total (MLM base + 2M-FP SFT)
