

Fig A2.a - scaling of the primary regimes in forward passes

pooled 5-fold scaffold CV ONLY · every error bar and band = ± 1 sd across the 5 folds (no head-seed, no pretraining-seed spread), so every interval means the same thing · the 96M rung and unsup $\rightarrow$ sup's 48M rung are hold-out-only, so they are absent rather than interpolated · unsup $\rightarrow$ sup is at its TRUE total (MLM base + 2M-FP SFT)
