

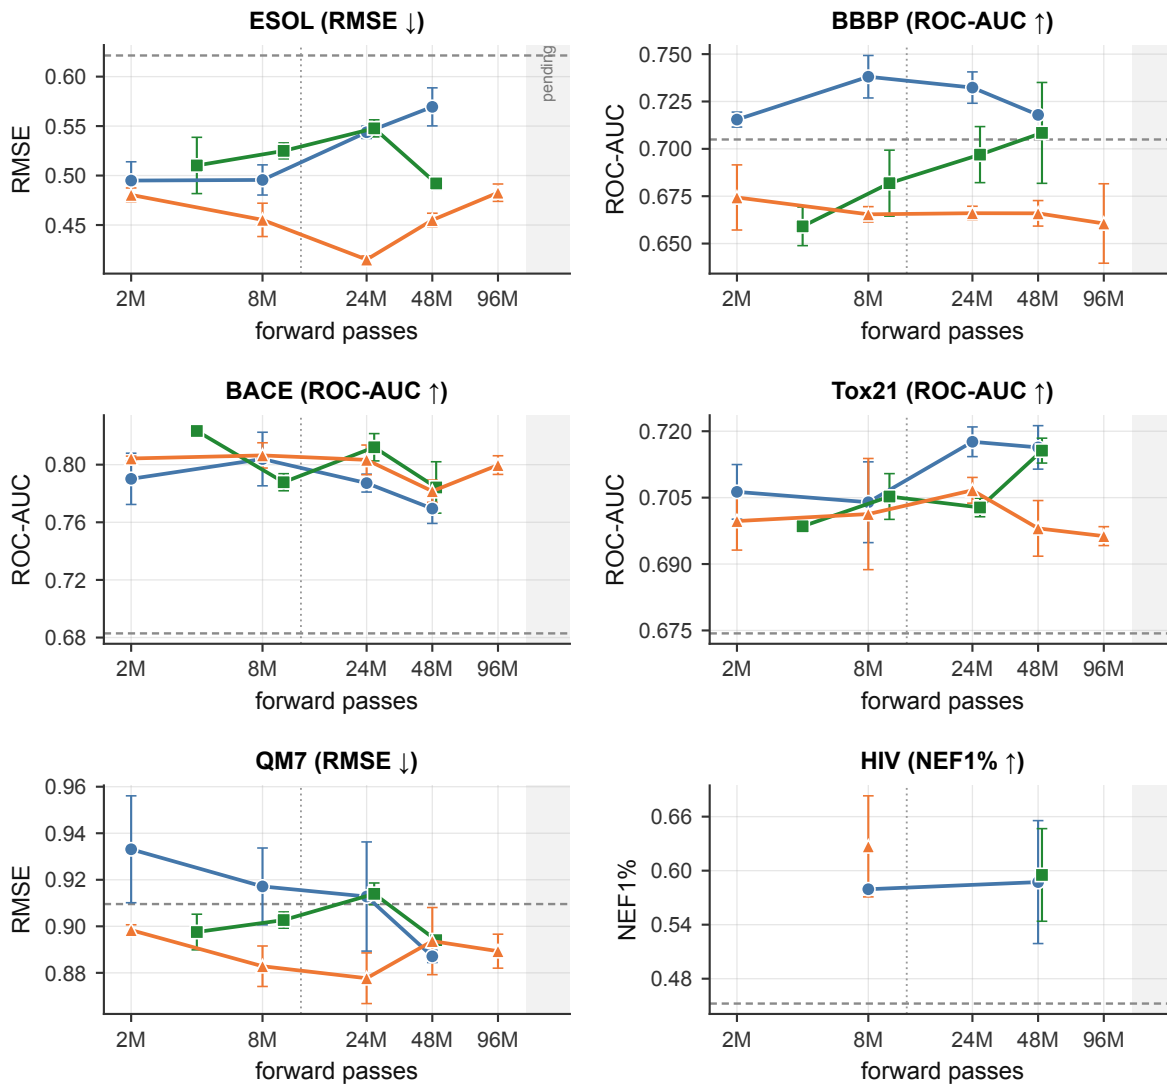

Fig A2 - scaling of the primary regimes in pretraining compute

DeepChem scaffold hold-out · error bars = pretraining-seed spread where replicates exist, else head-seed sd · unsup→sup plotted at its TRUE total (MLM base + 2M-FP SFT) · only sup_only reaches the 96M rung

● unsup_only (MLM) ▲ sup_only: dense (MTR) 1 epoch (12M-molecule corpus)
 ■ unsup→sup (MLM→SFT) --- no_pretrain (floor) ■ larger unsup runs pending (NO DATA)
