

Fig A1 (H1) - headline at 8M FP - balanced scaffold 5-fold CV (SI: easier split, split-variance error bars)

error bars = +/-1 std across 5 scaffold folds (real split variance) . NOTE: this split is easier than the DeepChem hold-out and compresses regime differences - use for uncertainty, not for headline effect sizes .
 pretraining seeds per arm - ecfp4:3 xgb-seed, fp_desc:3 xgb-seed, unsup_only:1, unsup2sup:1, sup_only:dense:1,
 sup_only:sparse_all:1, sup_only:dense_plus_sparse:1, sup_only:minimol_full:1, sup_only:mixed:1
